SFE Webinar: Introduction to the SE FireMap

Description: The SE FireMap is a new fire mapping system for the Southeastern United States. Developed with funding provided by the USDA NRCS, SE FireMap uses a remote sensing-based approach to track both prescribed fire and wildfire activity on public and private lands across the range of the longleaf pine. SE FireMap is being developed as a critical decision support tool to maximize the effectiveness of fire management practices across boundaries, ecosystems, and jurisdictions. This webinar will introduce the SE FireMap, describe the source of the fire data, and explore the current opportunities to use the system. Following the presentations there will be time for audience Q/A with the speakers. Visit the SE FireMap on the Landscape Partnership Portal for more information.

Scheduled Time: 1:00 – 2:00 PM ET April 16, 2021

Speakers: Bridgett Costanzo, Working Lands for Wildlife Coordinator-Eastern US, USDA Natural Resources Conservation Service
Joe Noble, Geospatial Program Director, Tall Timbers Research Station and Land Conservancy
Lucas Furman, SE FireMap Technical Oversight Team Lead, The Longleaf Alliance

Webinar Partners: USDA NRCS, Tall Timbers Research Station, The Longleaf Alliance, the Southern Fire Exchange, Joint Fire Science Program, and the University of Florida.

Webinar Target Audience: Prescribed Fire Managers, Foresters, Biologists, Wildfire Managers, Land Managers, Researchers, Air Quality Managers
